

Interpreting Your Test Results

After receiving a COVID-19 test through UGL, you will receive one of three results:

- **Completed:** The virus was not detected in your [pooled test](#) and there is no reason at this time to suspect you have COVID-19.
- **Not Detected:** The virus was detected in your pooled test, but it was not detected in your individual sample. There is no reason to suspect you have COVID-19.
- **Detected:** The virus was detected in both your pooled test and your individual sample. It is likely that you have COVID-19.
